AMPATH Surgical App

# Alhaadi

is a 33-year-old male with a two-day history of abdominal pain. His pain started gradually around his umbilicus with radiation to the right lower abdomen. His pain continued to increase in severity and became associated with anorexia, one episode of vomiting, and some malaise. His pain now localizes to his right lower quadrant.

## Past History

Alhaadi denies any previous medical or surgical histories or any drug allergies and is otherwise healthy. He leads a relatively healthy lifestyle. He does not smoke or drink alcohol. He has not travelled outside the country recently and has not had any recent change in diet. He denies any sick contacts and has no family history of cancer or inflammatory bowel disease.

# Other Questions You Want to Ask

Select the most important other questions you would like to ask this patient.

Have you had a fever?

When did you last eat or drink anything?

When was your last bowel movement?

Have you had any diarrhea?

Have you had any other flu-like symptoms (headache, muscle aches, or sore throat)?

Have you had any nausea or vomiting?

---

In the feedback you receive, your answers will be rated 1-5 with **5** being the **best** choice.

X

Have you had a fever?

Patient Answer

I felt like I had a little fever over the last couple of days, but I have not had any chills.

X

When did you last eat or drink anything?

Patient Answer

Not for a couple of days. I haven't felt like eating anything.

X

When was your last bowel movement?

Patient Answer

I think it was 2-3 days ago.

X

Have you had any diarrhea?

Patient Answer

No, I have not had any diarrhea.

X

Have you had any other flu-like symptoms (headache, muscle aches, or sore throat)?

### Patient Answer

I am not having any symptoms like that. I have not been sick for over a year.

X

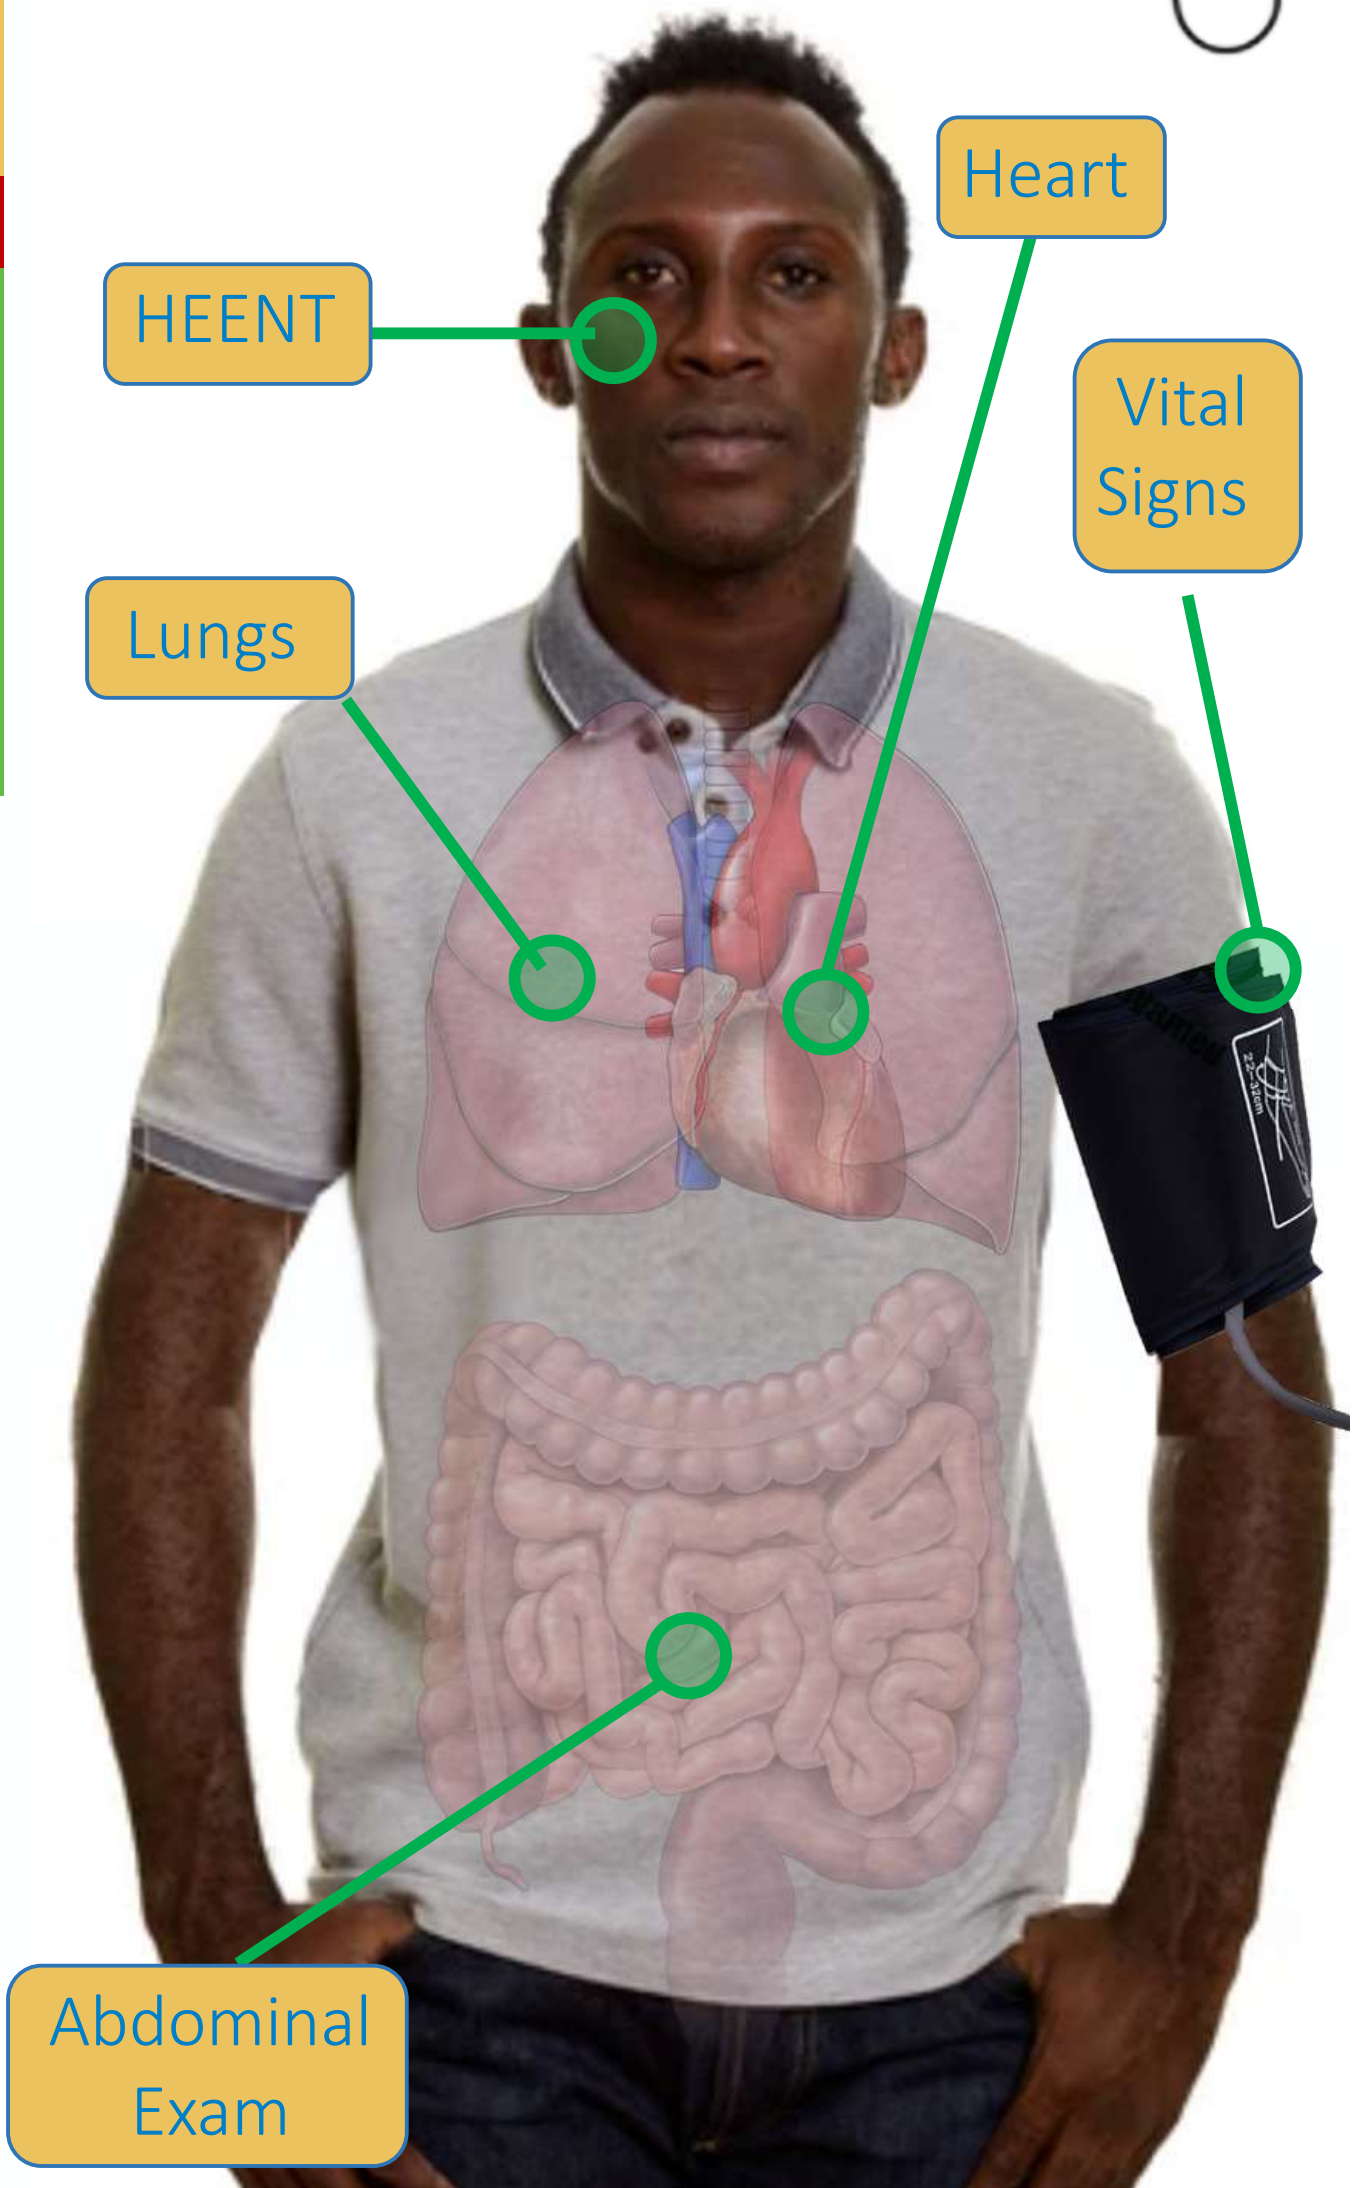

Have you had any nausea or vomiting?

Patient Answer

Besides this stomach pain, I have been feeling fine.
